Not a chance						Maybe				Definitely!

What is your favourite feature in our product?

My favourite part of this product was the fact that there were different chart types to choose from when presenting the results to a question. Depending on the questions I ask, I feel like some graph types depict the results better than others, so it's good to have several options to choose from.

What improvements can we make to improve the prototypes?

The main thing I would focus on improving is the customizability of the application. The only thing I was able to edit was the title, and it took me some time to see how to do that. You should be able to customize more things in a more clear way.

Additional comments:

Overall, the application seems like a good idea and it was pretty intuitive. I feel like it has the potential to be very useful for virtual meeting leaders.

Thank you very much for your valuable opinions!
