

The following sheet was used to record the test results. For each user, we filled out one sheet per prototype tested.

Prototype Number: 1

Task Number*	Was the task completed?	Observations from the observer	Feedback and comments from the user
1	Somewhat	<ul style="list-style-type: none">- Did not know what record button does simply could not do the test- Had to explain it to do this test and the rest- Maybe we need to make a tutorial or better signifier	<ul style="list-style-type: none">- "I don't know what to do"
2	Yes	<ul style="list-style-type: none">- Much worse with technology than other observer- Didn't realize he can look at a preview then click visualize again to choose another	<ul style="list-style-type: none">- "One format is enough for me"
3	Yes	<ul style="list-style-type: none">- Only tried to edit the title did not know anything else was clickable- Got to that point find though which is a nice change of pace	
4	No	<ul style="list-style-type: none">- Didn't find any other alternatives other than the 4 we offered	

5	Yes	<ul style="list-style-type: none"> - Live messages would obviously make them realize it is a zoom chat - Did not even think about Slow chat button 	<ul style="list-style-type: none"> - “Chat is right there; would this connect to Zoom”
---	-----	--	---

*Note that the task number is as indicated in the “Descriptions of Test Tasks” document

Prototype Number: 2

Task Number*	Was the task completed?	Observations from the observer	Feedback and comments from the user
1	Yes	<ul style="list-style-type: none"> - This design worked much better but maybe because it came second - Seemed to like this design better 	
2	Yes	<ul style="list-style-type: none"> - Just had to look at the main screen after pressing record, with this design it was very easy. (Same as last user) 	
3	Yes	<ul style="list-style-type: none"> - Same as last prototype only tried to edit title 	<ul style="list-style-type: none"> - “Add something to show what I can edit”
4	No	<ul style="list-style-type: none"> - Did not realize that could press + to find more graph options - I think they were just happy with available options on display 	<ul style="list-style-type: none"> - “I don’t know how to get more than this”

5	Yes	<ul style="list-style-type: none"> - Did not know what slow chat meant again - Was able to see chat but did not understand what the x and check mark meant 	<ul style="list-style-type: none"> - “The chat is visible, but I don’t know what half the symbols are there for”
---	-----	--	---

*Note that the task number is as indicated in the “Descriptions of Test Tasks” document

Prototype Number: 3

Task Number*	Was the task completed?	Observations from the observer	Feedback and comments from the user
1	Yes	<ul style="list-style-type: none"> - The user asked “Can you hear me? It is not too difficult for you to hear me, is it?” When multiple answers of “No” were collected, the user interpreted it as “No, we cannot hear you”. 	
2	Yes	<ul style="list-style-type: none"> - The user saw the data visualization easily, but was unsure what those numbers represent. The user kept asking if the numbers represented ratios, or actual numbers, or choices. 	<ul style="list-style-type: none"> - The user asked: “there are only 16+8+12 people shown in graph, why does it show that 70 out of 200 people answered the question?”
3	No	<ul style="list-style-type: none"> - The user tried to save the graph with a name but did not succeed, because such function is not supported in this prototype. 	

4	Yes	<ul style="list-style-type: none"> - The user keeps changing between different graph types, but cannot decide with graph looks best. 	
5	Yes	<ul style="list-style-type: none"> - The user chose to stick with the mini mode, which fits inside Zoom window much naturally. 	<ul style="list-style-type: none"> - The user commented: "I like the mini mode, it's tidy"

*Note that the task number is as indicated in the "Descriptions of Test Tasks" document
